

Pass Box

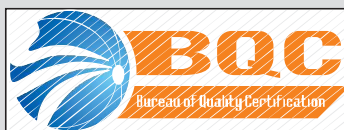

VAF's Pass Box

- **Buzzer** - A Buzzer can be added to the pass box. A buzzer button is added for the personnel to inform the another personnel at the other side of the pass box that the item is already pass into the pass box and it is ready to be tranfered at the another side of pass box.
- **Indicating Light** - The indicating light is used as signal to show whether the door at another side is open or close. Usually the signal shows the door is opened when light is on and vice versa.
- **Intercall** - The intercall also can be installed at the air shower for communication purpose between the two personnel at different side of the pass box

Introduction to VAF Pass Box

The Pass Box is used to transfer the items in and out between two different class of cleanroom or between cleanroom and the grey area. The pass box is designed in such the way that it is able to suit the opening of the wall. It is usually use for the convenience of passing the small items in or out the cleanroom where the person does not have to enter the cleanroom and gone through the whole garment changing and air showering process.
